6pc Flexible Million Color SMD Engine Bay Lighting Kit

Warning: This kit is for off road use only. Please check your state and local laws before installing this Engine Bay Lighting Kit. Every state has different policies and procedures in place regarding aftermarket LED lighting accessories. LEDGlow is not responsible for any fines that you may receive while using this lighting kit.

Warning: The installation of this kit is recommended to be performed by a licensed professional. The improper installation of this kit will void all warranties.

The control box must be installed in a dry location! Having this part exposed to water or the elements will cause the kit to fail. Any water damage or corrosion to this part will void all warranties.

PLEASE READ THE FOLLOWING INSTRUCTIONS THOROUGHLY BEFORE INSTALLING AND OPERATING THIS ENGINE BAY LIGHTING KIT.

Engine Bay Lighting Kit Includes:

- (6) 6" Flexible Engine Bay Tubes
- (1) Control Box
- (1) Wireless Remote
- (1) 6pc Foam Tape Strip Packet
- Zip Ties

Engine Bay Lighting Kit Installation:

1. Arrange the tubes the way you plan to install them in the engine bay of the vehicle and test the kit on any 12v power source to ensure it is functioning properly prior to installation.
2. Each engine bay tube can be mounted in many places in the engine bay of the vehicle. Leave at least 8 inches between any heat source and the engine bay tubes. Keep the tubes and the power wires away from any moving parts.
3. **Optional:** Remove any trim pieces from the engine bay of the vehicle that may hinder the installation of the LED tubes.
4. Starting on one end of the engine bay, mount the tubes with plenty of clearance from any moving part. Repeat this step with the remaining tubes. **Optional:** Foam tape is included with this engine bay lighting kit and can be used on the back side of the tube for mounting purposes. The clean and dry mounting surface should be between 45 and 85 degrees Fahrenheit to achieve the strongest bonding results from the foam tape. You can also use zip ties instead of the foam tape to mount the light tubes to the desired locations.
5. Find a safe, secure and dry location to mount the control box. We recommend mounting the control box on the firewall, inside the fuse box or under your dashboard.
6. Now that the tubes and control box are mounted, you can run the tube wires to the control box location. Use zip ties to secure the power cables to their mounting points. Make sure the cables are not close to anything that may potentially cut or melt the cables.
7. You can power this kit by running the power and ground wires directly to the battery or connecting it to the fuse panel using LEDGlow's Expandable Circuit, which is available at www.LEDUnderbody.com.
 - If you are running the power and ground wires to the battery and going through the firewall or any other metal parts, you must protect the wires by using an existing grommet or by drilling a new hole in the firewall and adding a new grommet. If you need to extend the wires, be sure to use 16 or 18 gauge automotive grade wiring and re-install a fuse within 6 inches of the power source. (Fuse not included if you extend the wires.)

The red power wire connects to the positive (+) terminal and the black ground wire connects to the negative (-) terminal of the battery.

- If you are powering your engine bay kit using LEDGlow's Expandable Circuit, be sure to power the kit from any 5-10 amp fuse. Remove the stock fuse from the fuse panel and insert into the empty slot of the expandable circuit, next to the included 4 amp fuse. Next, crimp the red power wire into the blue butt connector of the expandable circuit and insert the circuit into the empty fuse slot. Connect the black ground wire to an unpainted, bare metal ground source.
8. If you removed any engine bay trim pieces for the installation, you can now reinstall those pieces and test the functionality of the kit once more.

Wireless Remote Functions:

This kit provides multiple colors, lighting patterns and several speed levels, which are easily operated using the included wireless remote. The remote includes four buttons, "A, B, C and D"

- Button A:** Turns the Kit On & Off
- Button B:** Controls Color and Pattern Selections
- Button C:** Increase Pattern Speed
- Button D:** Decrease Pattern Speed

Reprogramming the Wireless Remote: To reprogram the wireless remote, you will simultaneously press and hold the button located on the control box and button "B" on the wireless remote for 3-5 seconds. If the reprogramming was successful, your lighting kit will flash the color green.

Troubleshooting: If the kit does not appear to operate properly, first check the installed inline mini fuse. If the fuse is blown, check the wires on the entire kit to ensure they are not cut, pinched or scorched. If there is no damage to any of the wires and no water damage is visible to the control box, replace the fuse and test the kit again. If the inline fuse is intact, clean the grounding location of the black wire. A poor grounding location can cause a poor connection or simulate being disconnected.
