4pc Single Color Marine LED Lighting Kit

Warning: We highly recommend that this kit be installed by a licensed professional. Any failure of this kit due to improper installation will void all warranties. Be sure to power and test your Single Color Marine Lighting Kit for full functionality prior to installation by connecting the tubes to the power wire and applying the power wire directly to a 12 volt power source, the black wire to a strong ground source and disconnecting once you have checked for full functionality.

Single Color Marine Lighting Kit Includes:

- (3) 24" Waterproof Marine Lighting Tubes with Dual Connectors
- (1) 24" Waterproof Marine Lighting Tube with a Single Connector
- (1) 10' Power Wire
- (8) Mounting Brackets
- (16) Mounting Screws

Please read the following instructions thoroughly before installing this Single Color Marine Lighting Kit

1. Prior to installing this kit, it is highly recommended that you mock up each of the lighting tubes to your planned mounting locations, this will ensure that you don't run into any issues once you start to mount each lighting tube. Some good mounting locations include under the gunnels, inside of your cabin or around your console, but each tube can be virtually mounted in any location.
2. Route and secure the included 10' power wire to your auxiliary or accessory power switch that is located on your boat's console using zip ties. **Note:** Be sure that this power wire is being connected to a 12 volt power source. If you are connecting the power wire to an aftermarket switch, be sure that it is connected to your boat's breaker system. We do not recommend powering this kit directly from the battery.
3. Once the power wire is routed and secured, connect a light bar to the power wire using the male to female modular connectors. When connecting the lighting tubes to the power wire or to each other, be sure that the male and female pins line up correctly before connecting the tubes and tightening the waterproof screw cap. Not aligning the pins correctly could cause them to break and make the lighting tube fail. **Note:** When connecting the lighting tubes together, be sure that the O-Ring on the female connector is properly seated before tightening the waterproof screw cap. Failure to seat the O-Ring correctly will result in the connection not being fully waterproof.
4. Once the first light bar is connected to the lead power wire, you can finish connecting the other tubes using the female modular connectors. Each lighting tube is daisy chained to the next making your installation much easier. Use the included double sided stick tape and the mounting brackets and screws to secure the tubes to location of your choice on the boat. If you are using the mounting brackets and screws for the installation, it is imperative that you do not screw through anything that will damage your boat. **Note:** LEDGlow offers 3M™ Adhesion Promoter that creates an extra layer of adhesion between the boat lighting strip and your boat. This promoter is not required for installation, but gives additional strength to the already included 3M™ tape.
5. If the tubes are being placed on both sides of the boat, you will have to route the wiring from one of the tubes to the tubes on the other side of the boat. The wiring can be secured to the boat chassis using zip ties, or can be held in place by using a zip tie mount, which is not included with the kit purchase.
6. Once the light bars are mounted on your boat, you can now power up the system by applying the red power wire to the 12 volt power source and connecting the black wire to a strong ground source.
7. Once all of your tubes are fully installed and powered, power the system on to ensure they are functioning properly.
