Headlight Accessory Add-On Harness for 2018-2019 GMC Sierra Denali 2500/3500

Part # LU-A-FGL-WH-02

Note: This add-on harness is designed to easily integrate 12-volt accessories controlled by the vehicle's running lights. For a larger amp-draw accessory, a relay must be installed to supply adequate voltage to the accessory.

1. Remove the driver's side fender brace using a 10mm socket.
2. Remove the driver's side battery from the vehicle.
3. Locate and unplug the connector on the back of the driver's side headlight.
4. Plug the add-on harness into the back of the driver's side headlight.
5. Plug the factory harness into the pass-through harness
6. If you are installing a relay kit, follow the installation instructions for the relay kit that you are using and connect the Red Wire from the pass-through harness to the relay trigger.
7. Connect the Black Wire from the pass-through harness to the ground of the accessory.
8. Be sure to secure any loose wiring with zip ties away from the heat of the radiator and moving parts.
